Multifunctional linear actuators for adjusting air dampers and slide valves in ventilation and air-conditioning systems for building services installations

- For air control dampers up to approx. $1 \mathrm{~m}^{2}$
- Actuating force 150 N
- Nominal voltage AC/DC 24 V
- Control: modulating DC 0 ... 10 V or variable
- Position feedback DC 2 ... 10 V or variable
- Lenght of stroke $\mathbf{6 0 , 1 0 0 , 2 0 0}$ or $\mathbf{3 0 0} \mathrm{mm}$

## Overview of types

| Type | Stroke (adjustable in steps of 20 mm ) | Operating range | Weight |
| :--- | :--- | :--- | :--- |
| LH24A-MF60-TP | Up to max. 60 mm | DC $2 \ldots 10 \mathrm{~V} \simeq 0 \ldots 60 \mathrm{~mm}$ | 500 g |
| LH24A-MF100-TP | Up to max. 100 mm | DC $2 \ldots 10 \mathrm{~V} \simeq 0 \ldots 100 \mathrm{~mm}$ | 515 g |
| LH24A-MF200-TP | Up to max. 200 mm | DC $2 \ldots 10 \mathrm{~V} \simeq 0 \ldots 200 \mathrm{~mm}$ | 540 g |
| LH24A-MF300-TP | Up to max. 300 mm | DC $2 \ldots 10 \mathrm{~V} \simeq 0 \ldots 300 \mathrm{~mm}$ | 575 g |

## Safety notes

- The actuator is not allowed to be used outside the specified field of application, especially not in aircraft or any other form of air transport.
- Assembly must be carried out by trained personnel. Any legal regulations or regulations issued by authorities must be observed during assembly.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- The cable must nut be removed from the device.
- The rotary supports and coupling pieces available as accessories must always be used if lateral forces are likely.
In addition, the actuator must not be tightly bolted to the application. It must remain movable via the rotary support (refer to "Assembly notes").
- If the linear actuator is exposed to severely contaminated atmosphere, appropriate precautions must be taken on the system side. Excessive deposits of dust, soot etc. can prevent the gear rack from being extended and retracted correctly.
- If not installed horizontally, the gear disengagement pushbutton may only be actuated when there is no pressure on the gear rod
- When calculating the required actuating force, the specifications supplied by the damper or slide valve manufacturers (cross section, design, installation site), and the air flow conditions must be observed.
- If a rotary support and/or coupling piece is used, losses in the actuation force are to be expected.
- The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

## Product features

| Mode of operation | The actuator is controlled with a standard modulating signal of DC $0 \ldots 10 \mathrm{~V}$ and travels to the <br> position defined by the control signal. Measuring voltage U serves for the electrical display of the <br> damper position $0 \ldots 100 \%$ and as slave control signal for other actuators. |
| :--- | :--- |
| Parameterisable actuators | The factory settings cover the most common applications. Input and output signals and other <br> parameters can be altered with the MFT-H parameterising device or the BELIMO Service Tool, <br> MFT-P. |
| Simple direct mounting | The actuator can be directly connected with the application using the enclosed screws. The head <br> of the gear rod is connected to the moving part of the ventilation application individually on the <br> mounting side or with the Z-KS2 coupling piece provided. |
| Manual override | Manual operation is possible with the pushbutton (the gearing latch remains disengaged as long <br> as the pushbutton is pressed or detented). |
| Stroke adjustment | The stroke of the gear rack can be adjusted on both sides in increments of 20 mm by means of <br> mechanical end stops. |
| High functional reliability | The actuator is overload-proof, requires no limit switches and automatically stops when the end <br> stop is reached. |

Product features
(Continued)
Home position When the supply voltage is switched on for the first time, i.e. at commissioning or after pressing the "gear disengagement" switch, the actuator travels to the home position.

| Pos. direction of stroke switch | Home position |
| :--- | :--- |
| $\int_{0}^{1} \downarrow \quad \mathrm{Y}=0$ | extended |
| $\mathrm{Y}=0$ | retracted |

The actuator then moves into the position defined by the control signal.

## Assembly notes

## Application without lateral forces

Application with lateral forces

## Caution

If a rotary support and/or coupling piece is used, losses in the actuation force are to be expected.

The linear actuator is screwed directly to the housing at three points. Afterwards, the head of the gear rod is fastened to the moving part of the ventilation application (e.g. damper or slide valve).

The coupling piece with the internal thread (Z-KS2) is connected to the head of the gear rod. The rotary support (Z-DS1) is screwed to the ventilation application. Afterwards, the linear actuator is screwed to the previously mounted rotary support with the enclosed screw. Afterwards, the coupling piece, which is mounted to the head of the gear rod, is attached to the moving part of the ventilation application (e.g. damper or slide valve).
The transverse forces can be compensated for to a certain limit with the rotary support and/or coupling piece. The maximum permissible swivel angle of the rotary support and coupling piece is $10^{\circ} \Varangle$, laterally and upwards.

## Functions with basic values

Override control with AC 24 V
with relay contacts

Remote control 0 ... $100 \%$

## Position indication

## Override control with AC 24 V

## with rotary control switch

## Minimum limit

Control with 4 ... 20 mA via external resistance

The $500 \Omega$ resistor converts the 4 ... 20 mA current signal to a voltage signal DC $2 \ldots 10 \mathrm{~V}$

## Functional check

## Procedure

- Apply 24 V to connection 1 and 2
- Disconnect connection 3 :
- For direction of stroke 0 :

Actuator travels in the direction of $\downarrow$

- For direction of stroke 1:

Actuator travels in the direction of $\bar{\uparrow}$

- Short circuit connections 2 and 3:
- Actuator travels in the opposite direction

Functions for actuators with specific parameters

Override control and limiting with AC 24 V with relay contacts

Override control and limiting with AC 24 V with rotary switch

${ }^{1}$ ) Caution! This function is only guaranteed if the start point of the operating range is defined as min. 0.6 V

## 3-point control

Open-close control

## Dimensions [mm]

## Operating controls and indicators

(1) Direction of stroke switch

Switching over: Direction of stroke changes
(2) Pushbutton and green LED display

Off: $\quad$ No voltage supply or malfunction
On: Operation
Press button: Switches on stoke adaption followed by standard operation
(3) Pushbutton and yellow LED display

Off: Standard operation
On: Adaption or synchronising process active
Press button: No function
(4) Gear disengagement switch

Press button: Gear disengaged, motor stops, manual operation possible
Release button: Gear engaged, synchronisation starts, followed by standard operation
(5) Service plug

For connecting parameterising and service tools
Check voltage supply connection
a) (2) Off and (3) On Check the supply connections.
b) (2) Blinking and (3) Blinking Possibly $\pm$ and $\mathfrak{f}$ are swapped over.
